**Backtest** Station

# Strategy Backtest: BinHV45

Free open-source strategy, tested with its default settings · source (GPL-3.0) · Report S-04 · 2026-11-07 UTC

1-minute Bollinger-band scalper.

**CAUTION**

46/100

**Inconclusive**
Edge Score combines profit after fees, consistency across years, drawdown, sample size, beating buy-and-hold, and the lookahead check.

Edge Score

Scan to verify
S-04 · 693c8217

Check this report: https://backteststation.github.io/verify.html (ID S-04, code 693c8217). PASS = edge held up in this test; CAUTION = mixed or too little evidence; FAIL = no edge, or data that cannot be trusted.

### Test confidence: 97.5%

How sure we are that these are the results you would really have had in this period. Why it is not 100%:

• –1.0: a backtest replays candles; live fills, latency and outages are not reproduced exactly

• –1.5: inside each candle the order of high and low is unknown, so stops and targets hit in the same candle are approximated

**Data:** Binance spot 1m candles from Binance's public API · **Period:** 2026-05-01 00:00 to 2026-10-31 00:00 UTC · **Coins (20):** BTC, ETH, SOL, XRP, DOGE, ADA, DOT, NEAR, ATOM, FIL, INJ, ARB, OP, APT, SUI, LDO, FET, HBAR, ALGO, ICP

## Results

| | |
|---|---|
| Period | 2026-05-01 to 2026-10-31 (183 days) |
| Total return | +1.4% (13.92 USDT) |
| Holding the same coins | +10.4% |
| Yearly growth (CAGR) | +2.8% |
| Max drawdown | 3.0% |
| Trades / win rate | 21 / 85.7% |
| Profit factor | 1.45 |
| Sharpe / Sortino | 0.33 / 10.44 |
| With twice the fee | +0.6% |
| Profitable years | 1 of 1 |
| Lookahead bias | Not detected |

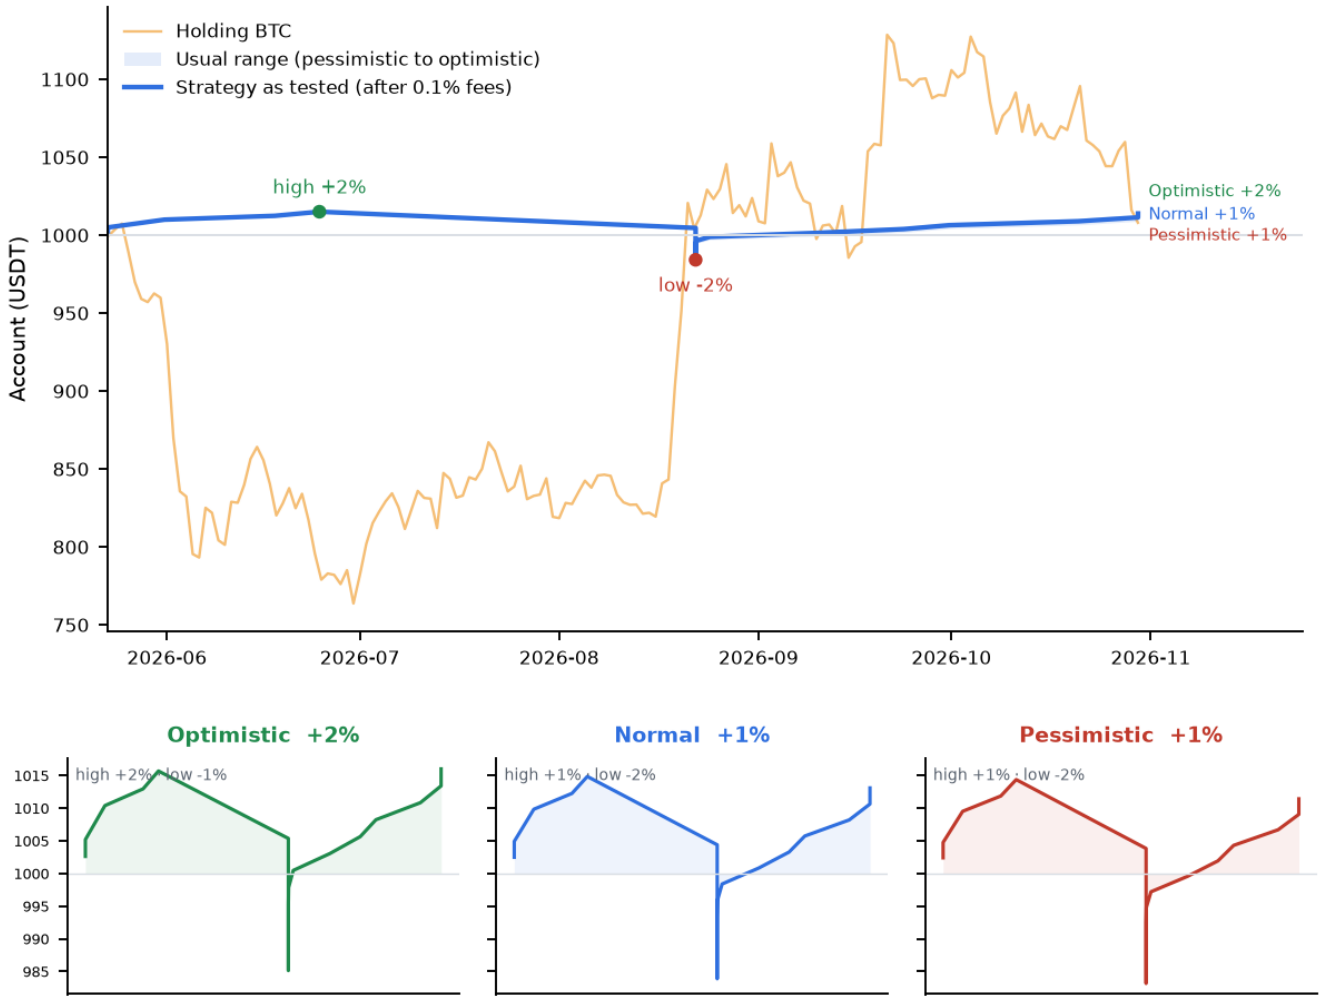

## Red flags

• Returned 1.4% while simply holding the same coins returned 10.4%.

• Only 21 trades: too few to tell skill from luck.

*We test the past, not the future.* This is an analysis of past performance. It is not a forecast of future results and not investment advice.

## Account growth

## Year by year

| Year | Trades | Win rate | Profit | Return |
|---|---|---|---|---|
| 2026 | 21 | 86% | 13.92 USDT | +1.4% |

## By market condition (BTC 30-day trend at entry)

| Market | Trades | Win rate | Profit |
|---|---|---|---|
| Down (< -10%) | 2 | 100% | 5.10 USDT |
| Up (> +10%) | 10 | 70% | -13.63 USDT |
| Sideways | 9 | 100% | 22.45 USDT |

## Optimistic, normal and pessimistic

| Case | Fee / side | Slippage / side | Result | Profit factor | Max drawdown |
|---|---|---|---|---|---|
| Optimistic | 0.075% | 0.00% | +1.6% | 1.52 | 3.0% |
| Normal | 0.100% | 0.01% | +1.3% | 1.42 | 3.1% |
| Pessimistic | 0.100% | 0.03% | +1.1% | 1.37 | 3.1% |

The verdict uses the numbers as tested. This is the usual range around them, each case at most 20% away from the tested result; extreme costs are covered by the fee stress test. What can move the result inside this range:

• **Fills:** large orders or thin coins may fill only partly, or a little later than the signal.

• **Slippage:** market orders fill a little worse than the candle price, more in fast markets and small coins.

• **Fees:** your exchange, VIP tier, BNB discount or maker orders change the cost of every trade.

• **Market conditions:** the tested period had its own trend and volatility; another market can change results a lot.

• **Latency and downtime:** delays between signal and order, API errors and exchange outages.

• **Funding (futures):** rates change over time and depend on the trade's direction.

• **Data and size:** prices differ slightly between exchanges, and results scale only while your size is small against the coin's volume.

## Assumptions

| | |
|---|---|
| Engine | Freqtrade backtesting with the strategy's own settings (ROI, stoploss, exits) |
| Data | Binance spot candles, 20 coins: BTC, ETH, SOL, XRP, DOGE, ADA, DOT, NEAR, ATOM, FIL, INJ, ARB, OP, APT, S |
| Account | 1000 USDT, up to 5 trades at once, full balance shared |
| Fees | 0.1% per side (Binance spot taker) |
| Lookahead check | Freqtrade lookahead-analysis on Jun-Sep 2026 |

## Disclaimer

This is an analysis of past performance. It is not a forecast of future results and not investment advice. The strategy belongs to its authors and is published under GPL-3.0; Backtest Station only tested it. Other settings, coins, exchanges or periods can give different results. Nothing here is a recommendation to use any strategy.

**Authors:** if other settings represent your strategy better, send them to @BacktestStationBot and we will retest it free and update this report. Verified owners can also ask for removal.
