Backtest Station

Strategy Backtest: NostalgiaForInfinity X8

Free open-source strategy, tested with its default settings · source (GPL-3.0) · Report S-01 · 2026-11-07 UTC

The most popular community strategy for Freqtrade; very large rule set with grinding and rebuys.

CAUTION

49/100

Edge Score

Inconclusive
Edge Score combines profit after fees, consistency across years, drawdown, sample size, beating buy-and-hold, and the lookahead check.

Scan to verify
S-01 · 7ad5e2b9

Check this report: https://backteststation.github.io/verify.html (ID S-01, code 7ad5e2b9). PASS = edge held up in this test; CAUTION = mixed or too little evidence; FAIL = no edge, or data that cannot be trusted.

Test confidence: 94.5%

How sure we are that these are the results you would really have had in this period. Why it is not 100%:

• –1.0: a backtest replays candles; live fills, latency and outages are not reproduced exactly

• –1.5: inside each candle the order of high and low is unknown, so stops and targets hit in the same candle are approximated

• –3.0: the future-data check could not be run

Data: Binance spot 5m candles from Binance's public API · **Period:** 2026-07-01 00:00 to 2026-10-31 00:00 UTC · **Coins (20):** BTC, ETH, SOL, XRP, DOGE, ADA, DOT, NEAR, ATOM, FIL, INJ, ARB, OP, APT, SUI, LDO, FET, HBAR, ALGO, ICP

Results

Period	2026-07-01 to 2026-10-31 (122 days)
Total return	+8.5% (85.37 USDT)
Holding the same coins	+33.6%
Yearly growth (CAGR)	+27.8%
Max drawdown	0.0%
Trades / win rate	18 / 100.0%
Profit factor	0.00
Sharpe / Sortino	3.63 / -100.00
With twice the fee	+8.0%
Profitable years	1 of 1
Lookahead bias	Not checked

Red flags

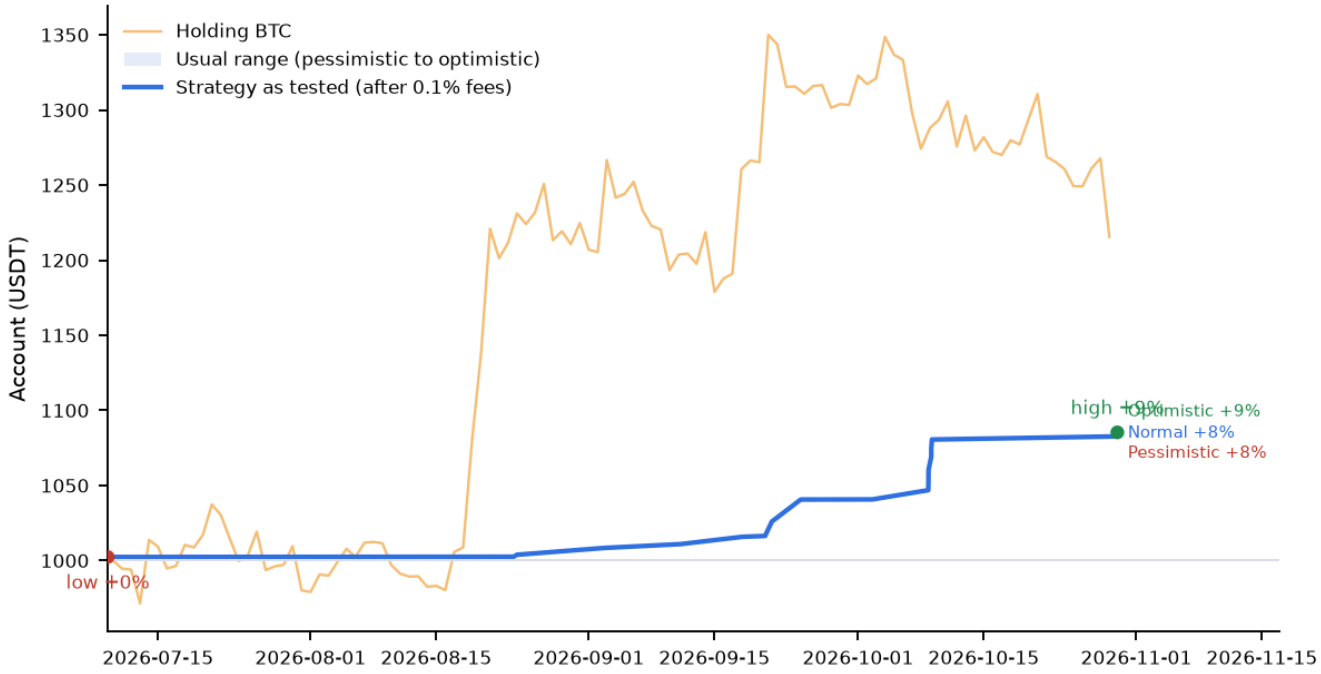

• Lookahead check not run: too large for the automatic lookahead check

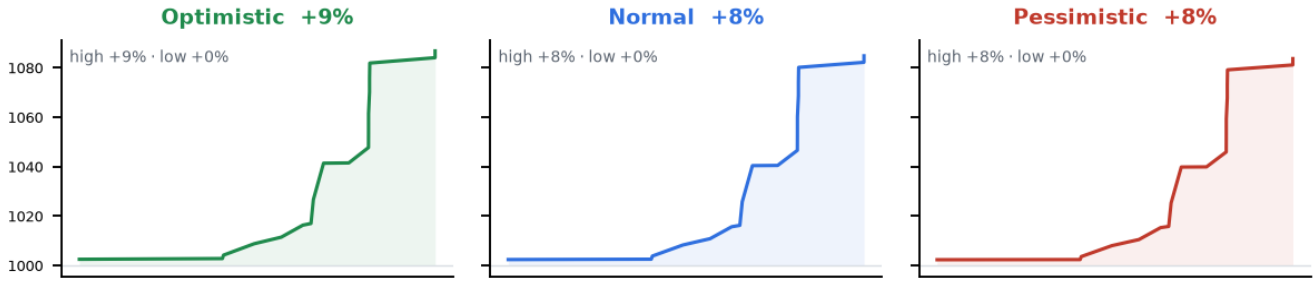

• Returned 8.5% while simply holding the same coins returned 33.6%.

• Only 18 trades: too few to tell skill from luck.

We test the past, not the future. This is an analysis of past performance. It is not a forecast of future results and not investment advice.

Account growth

Year by year

Year	Trades	Win rate	Profit	Return
2026	18	100%	85.37 USDT	+8.5%

By market condition (BTC 30-day trend at entry)

Market	Trades	Win rate	Profit
Up (> +10%)	6	100%	23.02 USDT
Sideways	12	100%	62.35 USDT

Optimistic, normal and pessimistic

Case	Fee / side	Slippage / side	Result	Profit factor	Max drawdown
Optimistic	0.075%	0.00%	+8.7%	inf	0.0%
Normal	0.100%	0.01%	+8.5%	inf	0.0%
Pessimistic	0.100%	0.03%	+8.4%	inf	0.0%

The verdict uses the numbers as tested. This is the usual range around them, each case at most 20% away from the tested result; extreme costs are covered by the fee stress test. What can move the result inside this range:

• **Fills:** large orders or thin coins may fill only partly, or a little later than the signal.

• **Slippage:** market orders fill a little worse than the candle price, more in fast markets and small coins.

• **Fees:** your exchange, VIP tier, BNB discount or maker orders change the cost of every trade.

- **Market conditions:** the tested period had its own trend and volatility; another market can change results a lot.
- **Latency and downtime:** delays between signal and order, API errors and exchange outages.
- **Funding (futures):** rates change over time and depend on the trade's direction.
- **Data and size:** prices differ slightly between exchanges, and results scale only while your size is small against the coin's volume.

Assumptions

Engine	Freqtrade backtesting with the strategy's own settings (ROI, stoploss, exits)
Data	Binance spot candles, 20 coins: BTC, ETH, SOL, XRP, DOGE, ADA, DOT, NEAR, ATOM, FIL, INJ, ARB, OP, APT, S
Account	1000 USDT, up to 5 trades at once, full balance shared
Fees	0.1% per side (Binance spot taker)
Lookahead check	Not run: too large for the automatic lookahead check

Disclaimer

This is an analysis of past performance. It is not a forecast of future results and not investment advice. The strategy belongs to its authors and is published under GPL-3.0; Backtest Station only tested it. Other settings, coins, exchanges or periods can give different results. Nothing here is a recommendation to use any strategy.

Authors: if other settings represent your strategy better, send them to @BacktestStationBot and we will retest it free and update this report. Verified owners can also ask for removal.
